OBJECTIVE

Motivated MSc IT student and BSc IT graduate with hands-on experience in developing websites, full-stack applications, and desktop software. Contributed to the development of corporate and product websites for Mindron Meditech and Mindron Group. Experienced working in startup environments handling both development and technical responsibilities. Seeking opportunities to apply my technical knowledge and contribute to innovative technology projects.

WORK EXPERIENCE

May 2025 - Present

PROJECTS

Mindron Group Website

Developed a dynamic and responsive website for Mindron Meditech Pvt Ltd using **React.js** along with **HTML, CSS, and JavaScript**. The main objective of the project was to showcase the company's medical equipment and provide detailed information through multiple pages. Used **npm** for package management and integrated **Nodemailer** to enable users to send inquiries directly via email through the contact form. Focused on creating a clean user interface, smooth navigation, and ensuring accessibility across different devices.

Mindron Meditech Website

Developed a responsive website for Mindron Group using **HTML, CSS, and JavaScript** to represent the organization's business operations and services. The website includes multiple sections, ensuring structured and accessible information for users. Focused on creating a clean, user-friendly interface with smooth navigation and proper content organization. Also handled updates and maintenance to keep the website information accurate and up to date.

DTI / IDT Application

Collaborated with a third-party team on the development and enhancement of the DTI/IDT application, contributing to system-level improvements and support activities. Assisted in **testing, debugging**, and updating **PCB-based** systems to ensure smooth functionality and performance. Conducted research and development on **Wifi** modules and supported their integration into the system. Played a key role in troubleshooting issues, improving system reliability, and ensuring effective coordination between hardware and software components.

Dharavi Veg Web

Developed a full-stack e-commerce web application for an online vegetable selling platform using **React.js and Firebase** (Firestore and Authentication). Implemented features such as user registration and login, product listing, shopping cart, and order placement. Designed a responsive and user-friendly interface for both customers and administrators. Utilized Firebase for real-time database management and secure authentication. Planned future enhancements including payment gateway integration and delivery tracking to improve scalability and user experience.

Courier Service Management

Built a desktop-based courier management system using Java Swing and MySQL to streamline courier tracking and management processes. Implemented secure login authentication and integrated a database for storing and managing courier details. Designed an interactive graphical user interface for efficient data entry, tracking, and retrieval. Focused on improving system usability and ensuring accurate handling of courier records.

EDUCATION

MSc IT (Currently Pursuing) – S.I.W.S College

BSc IT, 2025 – S.I.W.S College

TECHNICAL SKILLS

Web Development: HTML, CSS, JavaScript, React, ASP.NET MVC, Firebase
